Warehouse and logistics self audit

Four areas, eleven checks. Walk your floor, read each statement and mark yes or no, honestly. Every no is a place where money or time is probably leaking.

1. Receiving and inbound accuracy

- Inbound shipments are reconciled against purchase orders within two hours of dock arrival. Yes ☐ No ☐
- The receiving dock is fully clear at the end of every shift. Yes ☐ No ☐
- Item discrepancy rates are tracked per supplier, so vendors stay accountable. Yes ☐ No ☐

2. Storage and inventory control

- Your fastest moving items sit closest to the packing and shipping zone. Yes ☐ No ☐
- Cycle counting happens at least weekly, not only at the annual count. Yes ☐ No ☐
- Vertical space is fully used before anyone talks about more floor space. Yes ☐ No ☐

3. Picking, packing and order fulfilment

- Pickers walk planned routes with batch or zone picking, not single order trips. Yes ☐ No ☐
- Order accuracy is measured on every shift and reviewed when it dips. Yes ☐ No ☐
- Packing materials are standardized, so dimensional weight charges stay under control. Yes ☐ No ☐

4. Technology and carrier management

- Inventory updates across all selling channels in real time. Yes ☐ No ☐
- Shipping rates are compared across carriers before dispatch, not after. Yes ☐ No ☐

Scored your warehouse? Bring your answers to a free 30 minute diagnostic call. We go through your scores together, point at the first fixes and tell you honestly whether a full audit is worth it for you.
